

Additional updates and fixes

Our team has been hard at work not only on new features but also on refining the existing ones. Here are some of the improvements and fixes we've implemented:

- **Improved offline detection and handling:** We've made several enhancements to how HackMD detects when you're offline and handles the transition back to being online, ensuring a smoother user experience.
- **Keyboard shortcut fix:** We've fixed an issue where keyboard shortcuts could be triggered while editing comments. Now, you can edit comments without unexpected interruptions.
- **Pseudocode block rendering:** A bug that caused line numbers in pseudocode blocks to render incorrectly has been fixed. Special thanks to Patrick O'Grady for reporting this issue.
